building on the strength of steel

## DyMark Industries Reaches 5 Year Anniversary Milestone

January 1, 2008

A little more than five years ago, Marc Paquette took his dream to open his own business and turned it into reality. A welder by trade with many years of experience in metal fabrication, Marc and his team set out in 2003 to make their mark on the industry.

Building a business proved to be hard work that would end up being worth it– from the early days of creating wrought iron railings and working primarily with Massload Technologies building bulk weighers to providing structural steel to construction leaders where the corporation is today.

A young team with the motto, “Hell ya, we can do that”, DyMark Industries fearlessly tackled projects and began to establish itself as a player in the structural steel and metal fabrication industry. Successfully completing projects like the Water Treatment Plant and the Great Falls Ethanol Plant showcased the extraordinary abilities of the DyMark team.

Now, at its 5th anniversary, DyMark has proven to be able to play with the ‘big boys’ by recently completing major projects such as the Circle Drive Walkway, White Mud Metakaolin Facility and various projects at the University of Saskatchewan.

Over the years, growth has occurred in every aspect of the business. What was once a small manufacturing facility, is now bursting at the seams with equipment, people and products.

DyMark Industries was built on one simple philosophy: to work hard, provide quality products/services and play hard when the work is done. This philosophy still holds true today, and with a shiny new building on the horizon, the future of DyMark Industries looks brighter than ever.
