DyMark Industries Moves into New Head Office on Kinnear Avenue

January 5, 2009

Due to exceptional growth in both sales and staff, DyMark Industries made the decision to move from its initial location on 51st Street in Saskatoon and purchased land in the Marquis Industrial area located in the north end of Saskatoon.

Our new facility located 3719 Kinnear Avenue features a 3,000 ft² office space adjoined to the 10,000 ft² manufacturing facility. DyMark's new manufacturing facility is 100% larger than its initial facility on 51st Street.

The new manufacturing facility allows DyMark Industries to increase its production capabilities and allows staff ample room to work safely and effectively. 35 foot high ceilings, ample natural and artificial lights and advanced ventilation are only some of the highlights of the new manufacturing facility. Equipment in the new facility includes a computerized Hyd-Mech saw for cut precision and a Piranha dual operator control ironworker for accurate metal preparation/fabrication. DyMark's fenced exterior features several acres of storage space and loading bays for ease of shipments whether using our in-house corporate transportation or alternative transportation.

DyMark Industries is extremely proud that our new manufacturing facility is designed to reduce greenhouse gas emissions through the purification and recirculation of preheated air. Our state-of-the-art filtration system is designed to pull welding/industrial particulates out of the air into specialized holding compartments to be disposed of in a safe, environmentally friendly manner instead of being released directly into the air.

We invite you to come and visit our new corporate headquarters and look forward to working with you in our new facility.
