## **DyMark Donates Goal Posts to Warman Wolverine Football Team**

September 12, 2008

DyMark Industries proudly supported the Warman Wolverine Football Program by donating goal posts to the newly formed high school team. Situated on Neufeld Field directly east of the Warman High School, the goal posts will be used for football and will also serve as a frame for soccer nets in the soccer season.

The goal posts tower 30 feet above ground and measure 24 feet wide. The goal posts were custom fabricated by our DyMark manufacturing crew and were erected onsite by DyMark staff volunteers. Our friends at H&H Crane donated their crane time to hoist the posts and Froese Concrete donated the concrete to cement the posts into place. We sincerely thank H&H Crane and Froese Concrete for their contributions to this project.

DyMark Industries was proud to contribute its custom fabrication skills and staff time to this worthwhile community initiative. Many staff at DyMark Industries have participated in various levels of organized sports and understand the value that a sport like football can have in a community and in an individual's personal and professional career. President Marc Paquette who participated in several organized sports including high school football was eager to lend a hand by offering to donate the goal posts at the initial football information meeting. Brad Jensen, DyMark's Sales and Project Manager, also contributes his time to assist in coaching the Warman Wolverines.

Coach Brad Jensen says that although the Wolverines have yet to win a game, DyMark's CFL-grade goal posts help to intimidate visiting teams! Go Wolverines Go!
